TAFITI99

TAFITI99 * OPEN-SOURCE RESEARCH PORTFOLIO

TAFITI99 RESEARCH PORTFOLIO

Biostatistics, Epidemiological Pipelines & Reproducible Health Data Science in R & Quarto

Welcome to the TAFITI99 Research Portfolio. An open-source showcase of empirical public health research, advanced

CORE PILLARS OF THE RESEARCH PORTFOLIO

BIOSTATISTICAL MODELING
Advanced Inferential Methods

- Modified Poisson regression with sandwich SEs (Zou, 2004)
- Direct Prevalence & Risk Ratios (cPR / aPR)
- Overcomes Odds Ratio inflation on common outcomes (>10%)

Rigorous epidemiological modeling

REPRODUCIBLE PIPELINES
Script-to-RDS Checkpoints

- End-to-end data cleaning, verification & audit logging
- Zero-hardcoding: numbers flow directly into manuscripts
- Automated Quarto publishing to Word (.docx) & PDF

100% reproducible & traceable

METADATA GOVERNANCE
Production-Grade Standards

- Master Research Metadata & blueprint codebooks
- ICMJE & APA compliant tables via flextable
- Publication-ready figures & forest plots (ggplot2)

Enterprise clinical research quality

FEATURED PROJECT PIPELINE: 01.GROUP_E_2026 (REPRODUCTIVE HEALTH)

PIPELINE STAGE	ANALYTICAL WORKFLOW	TOOLS & METHODS	KEY DELIVERABLE
1. Data Governance	Survey cleaning, duplicate removal, age checks	KoboToolbox, R scripts, Metadata codebook	Analysis-ready dataset (N = 419 women)
2. Descriptive Profiling	Sociodemographics & 18-item knowledge scoring	Tidyverse, Clopper-Pearson / Wilson 95% CIs	Publication-grade Tables 4.1, 4.2 & 4.3
3. Bivariate Screening	Association tests across 3 pre-specified sections	Chi-Square, Fisher's exact, φ & Cramér's V	Comprehensive bivariate Table 4.4
